

SIKANDAR JADOON

AI Automation Engineer | Python | AI Agents | Software Engineering

Pakistan | 0311-2222441 | Jadoonsikander7@gmail.com | GitHub: github.com/sikander1020 | Portfolio: sikandarj.netlify.app

SUMMARY

Software Engineering graduate with hands-on experience building AI-powered applications, automation systems, and full-stack software projects. Experienced with Python, Flask, AI integrations, video automation, AI agents, REST APIs, Git/GitHub, and modern web technologies. Built independent projects including an AI-powered video automation platform and an AI penetration-testing assistant. Seeking an entry-level AI Engineer, AI Automation Engineer, Python Developer, or Software Engineer role.

TECHNICAL SKILLS

Programming	Python, JavaScript, TypeScript, HTML5, CSS3
AI & Automation	AI API Integration, AI Agents, n8n, ChatGPT/OpenAI integrations, AI workflows
Backend	Flask, REST APIs, API Integration
Video & Media	FFmpeg, MoviePy, Edge TTS, Video Processing, Text-to-Speech
Development	Git, GitHub, VS Code, Docker, Responsive Web Development
Data	Power BI

SELECTED PROJECTS

ForgeAI — AI-Powered Penetration Testing Assistant

TypeScript | AI Agents | Sandbox Execution | API Integration

- Built an AI-powered penetration-testing assistant focused on security testing and bug-bounty workflows.
- Implemented an autonomous agent workflow for AI-assisted security analysis and task execution.
- Integrated sandbox execution for running tools and handling files during security workflows.
- Integrated multiple AI models, with the project documenting support for 100+ models.
- Developed application infrastructure covering authentication, backend services, agent workflows, testing, and rate limiting.

Sikandar Video Suite — AI Video Automation Platform

Python | Flask | FFmpeg | MoviePy | Edge TTS | HTML/CSS/JavaScript

- Built an AI-powered video creation and automation platform for short-form content workflows.
- Developed video merging and processing functionality using FFmpeg and MoviePy.
- Integrated Edge TTS for AI voice generation with support for multiple voices and languages.
- Implemented script-to-video generation with automated imagery and narration workflows.
- Added voice customization features including age and mood/style presets.
- Built a Flask-based backend and web interface for uploading, processing, and generating videos.

Medibot — AI Health Assistant

AI Integration | Automation | Software Engineering

- Developed an AI-powered assistant as a Final Year Project.
- Integrated AI-powered workflows to provide automated responses and user assistance.
- Applied software engineering concepts including system design, APIs, and application development.

AI Ad Generator

AI Integration | Web Application

- Built a web-based AI tool for generating advertising and marketing content.
- Integrated ChatGPT-based functionality to automate content generation.

Zaybaash — E-Commerce Store

TypeScript | Web Development

- Developed a web-based e-commerce project for a clothing brand.
- Implemented the frontend structure and user-facing shopping experience using TypeScript-based web technologies.

EDUCATION

Bachelor's in Software Engineering — Iqra University | 2022–2026

Final Year Project: Medibot — AI Health Assistant

Relevant Coursework: Web Development, Object-Oriented Programming, Data Structures, Database Systems, Software Engineering

ADDITIONAL

- Strong problem-solving and analytical thinking

- Self-directed project development and technical experimentation
- Fast learner with experience across AI, automation, backend, and web technologies
